

Boeing Acquires Solis-Backed Miro Technologies

Ken Sweet and Michael Wursthorn

October 25, 2012

Boeing Co. is buying **Miro Technologies Inc.**, an enterprise and supply-chain management software company backed by **Solis Capital Partners**, for an undisclosed sum, Boeing said in a statement Thursday.

Miro will become part of **Boeing**'s global service and support division inside the company's defense, space and security business, Boeing said. Miro's software will be used as part of a software suite Boeing uses to link and fuse data from existing systems to improve company efficiency.

"**Boeing**'s services and logistics business has grown significantly in recent years, and Miro has been a trusted technology partner during that time," said Tony Parasida, president of Boeing's global services and support division, in the statement.

Craig Dupper, partner at Solis, wouldn't disclose terms of the deal but said the exit would give a boost to the firm's fund-raising efforts.

"In this [fundraising] environment, track record is very important," he said. "This deal is additive to our track record."

Mr. Dupper said he expects to hold a final close on **Solis Capital Partners II LLC** by the end of March 2013. The firm held a first close of \$42.5 million in February with a target of \$100 million, LBO Wire previously reported.

Solis Capital bought Miro in September 2004 for a then-undisclosed sum, for its specialized software that handles and manages government contracts. Miro, based in La Jolla, Calif., now employs approximately 120 people, and has operations in Saudi Arabia, Oman and the U.K. as well.
